***Other Remarks/Information***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hartmann (U.S. Patent No. 4,649,274) discloses a boresight device including a zero-expansion, glass ceramic, optical transfer tube for an airborne laser target acquisition and designation system.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

Any other inquiry concerning this communication or earlier communications from the examiner should be directed to David N. Spector whose telephone number is (571) 272-2338. The examiner can normally be reached at this number Monday through Friday between 6:00 AM and 2:30 PM. The fax number for the organization where this application is assigned is (703) 872-9306.

**DETAILED ACTION - ALLOWANCE**

Claims 1-14 are allowed. All claims thus being allowable, prosecution on the merits is closed in this application. A statement of the examiner's reasons for allowance is provided below in the paragraph which follows below.

***Reasons for Allowance***

The instant application is deemed to be directed to a improvement to optical systems employing collimated light beams which may be laterally off-set from an optical axis therein due to temperature excursions from the temperature at which said system was aligned. More specifically, the instant improvement provides a novel system/methods for eliminating angular alignment errors in such optical systems; wherein a lens used therein for focusing said collimated light beams is provided with a particular lens mount for moving said lens by an amount opposite to said lateral off-set so that said lens captures each said beam and provides that it come in on the optical centerline of said lens, as recited, *inter alia*, in each of the instant independent claims (Claim 1, Lines 4-6; Claim 10, Lines 3-5; Claim 14, Lines 8-10).

The prior art taken either singly or in combination fails to anticipate or fairly suggest the limitations of applicant's independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The claimed invention is therefore considered to be in condition for allowance as being novel and nonobvious over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
